

## TrueAIM

Agricultural Irrigation Management

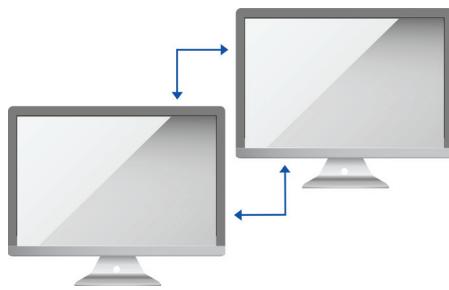

### Simplify. Automate. Streamline. Improve.

Comprehensive agriculture irrigation management software to automate, facilitate, and improve processes, services, and tracking.

TrueAIM automates the full realm of agriculture irrigation management functions that modern irrigation districts require. It equips you to save significant time, improve accuracy, facilitate customer self-service, and provide ready access to virtually all of the information needed for one, some, or all accounts on-demand. And TrueAIM is configurable and flexible to accommodate virtually all of your agency's requirements.

Automated Processes

Seamless Integration

Flexible & Configurable

## All of the functionality you need. Less time and effort.

### Account Management

TrueAIM automates your account management and handles all of the tasks needed to keep your operations flowing smoothly. It manages all information for customers' contracts, parcels, turnouts, and more. Tasks that were previously tedious and time-consuming are now simplified and streamlined. Even ownership changes, including splits and subdivisions are a breeze with TrueAIM.

### Water Ordering, Delivery, and Allocations

TrueAIM allows you to manage water delivery with unprecedented efficiency. It provides staff with a 360° view of accounts, so all information is current and available, right at their fingertips. TrueAIM automatically tracks and calculates account allocations, removing the need for manual calculations which take unnecessary extra time and can be vulnerable to human error. And it allows you to manage and view orders, water rights and allocations, deliveries, turn-on or -off requests, and changes, quickly and easily.

### Billing

TrueAIM tightly integrates and operates in harmony with TrueBill for a smooth process of accurate, easy, and timely billing. Usage information is communicated seamlessly to TrueAIM for up-to-date, accurate billing. Both TrueAIM and TrueBill allow you to assign any billing intervals, as appropriate to your agency.

### Incomparable Connectivity

Distribute and receive information to and from anywhere, whether a parcel owner, your staff in the office, or ditch tenders in the field. TrueAIM sends water orders and current deliveries to field personnel, such as ditch tenders, via laptops and/or mobile devices to manage water deliveries and meter readings. TrueAIM's notification companion allows you better communication with your customers with less effort, by sending out emails or text messages. And it interfaces with your SCADA system, so all information is perpetually up-to-date.

### Everything you need to operate optimally

TrueAIM has a full complement of capabilities to handle any or all of your needs:

- Water orders & deliveries

- Consumption data

- Seasonal water allocations

- On-demand reporting

- Customer notifications

Empower your customers with 24/7 self-service from anywhere and any device with a secure internet connection.

TrueCIP lets your customers view their account, including allocations, deliveries, account balance, and historical use and billing. It also allows customers to place water orders - all from a user-friendly portal that can be accessed from anywhere, at any time, and any device with a secure internet connection.

With TrueCIP, call volume is significantly reduced, improving productivity and alleviating workloads on staff. And your customers' experience, satisfaction, and confidence are dramatically improved.

TrueCIP seamlessly interfaces with TrueAIM and TrueBill and data is transferred in real-time, so customers can see all of their current and historical information - and in conjunction with TrueBill, online payments can also be made.
